Storage

Elite IT Experts

About Us

To be an Ineapple engineer one must have 10+ years of IT experience and have at least 2 active expert certifications from the list below.

All Flash SAN

When you couple high performance flash drives with low latency of storage area networking you get unmatched performance of persistent storage.

We work closely with flash storage innovators such as Pure Storage, NetApp, EMC, and Nimble and will integrate their solutions into your environment.

NAS and QOS

IP protocols like NFS, SMB, iSCSI, CIFS, and Cloud File APIs allow us to extend storage anywhere on IP network. However, without rigid QOS policy or dedicated network, your NAS performance will suffer.

Our team of experts can revive your network and bring it up to standards required by NAS protocols.

Hyperconvergence

Hyperconvergence takes the "Scale-Out" model of the storage systems and virtually overlays it over the compute systems. This gives you a unique advantage to grow your storage and compute clusters simultaneously.

We are experienced with a large variety of Hyperconverged systems that exists on the market today such as VMware VSAN, Cisco HyperFlex, Nutanix, and HPE SimpliVity.
